Recap

Recap of our App

Gathering aims to connect users to the world around them, strengthening their involvement in local communities. The app shows users local events, location specific content, business reviews and posts. All of which are user moderated/verified

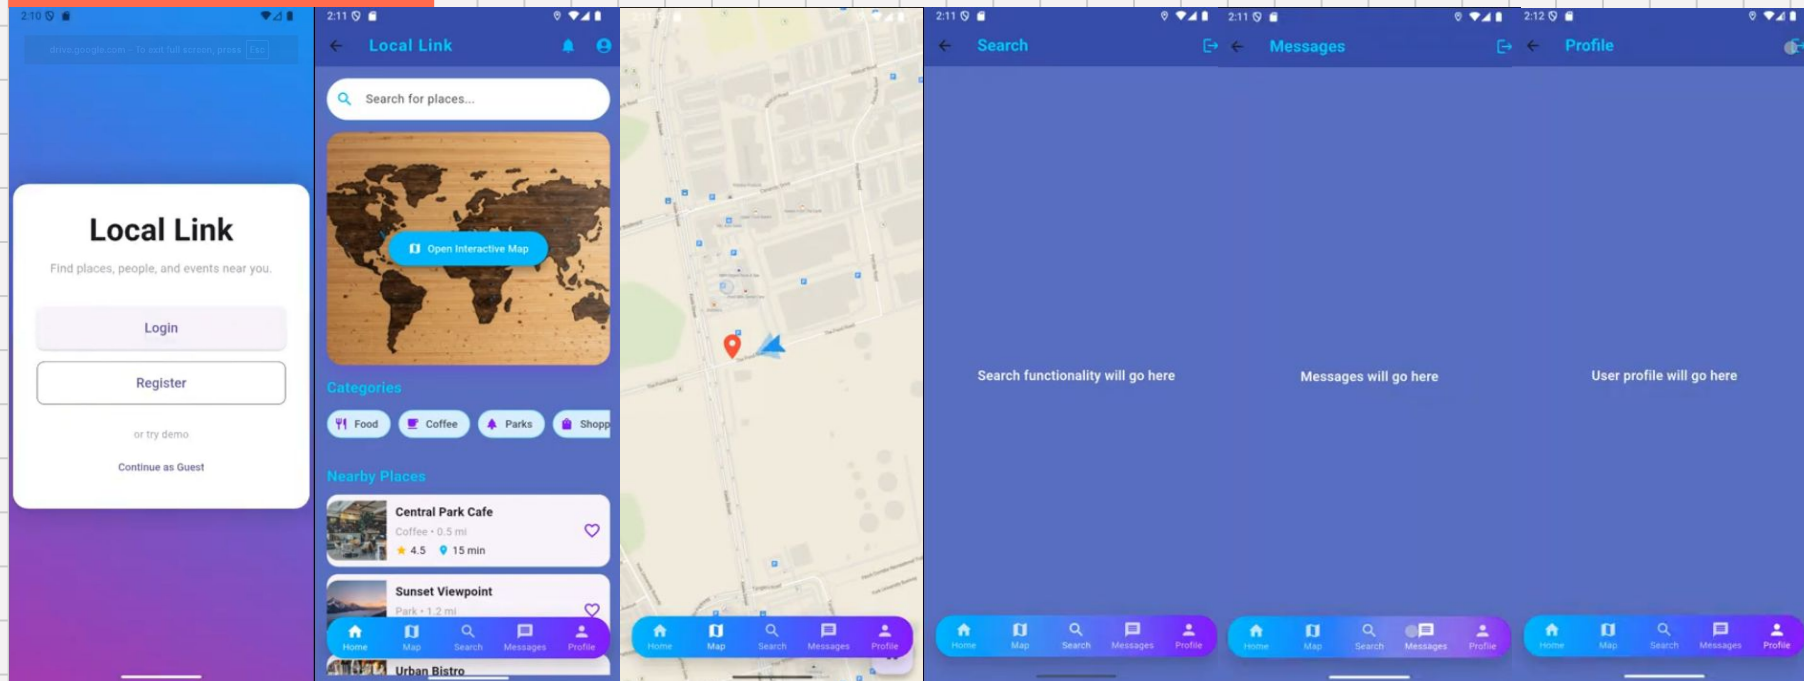

How does our app work?

Utilizing the users location info, the app displays a live map that is filled with other users content. Users can contribute to the shared map, or use it simply as an interactive map of interesting places other users have shared.

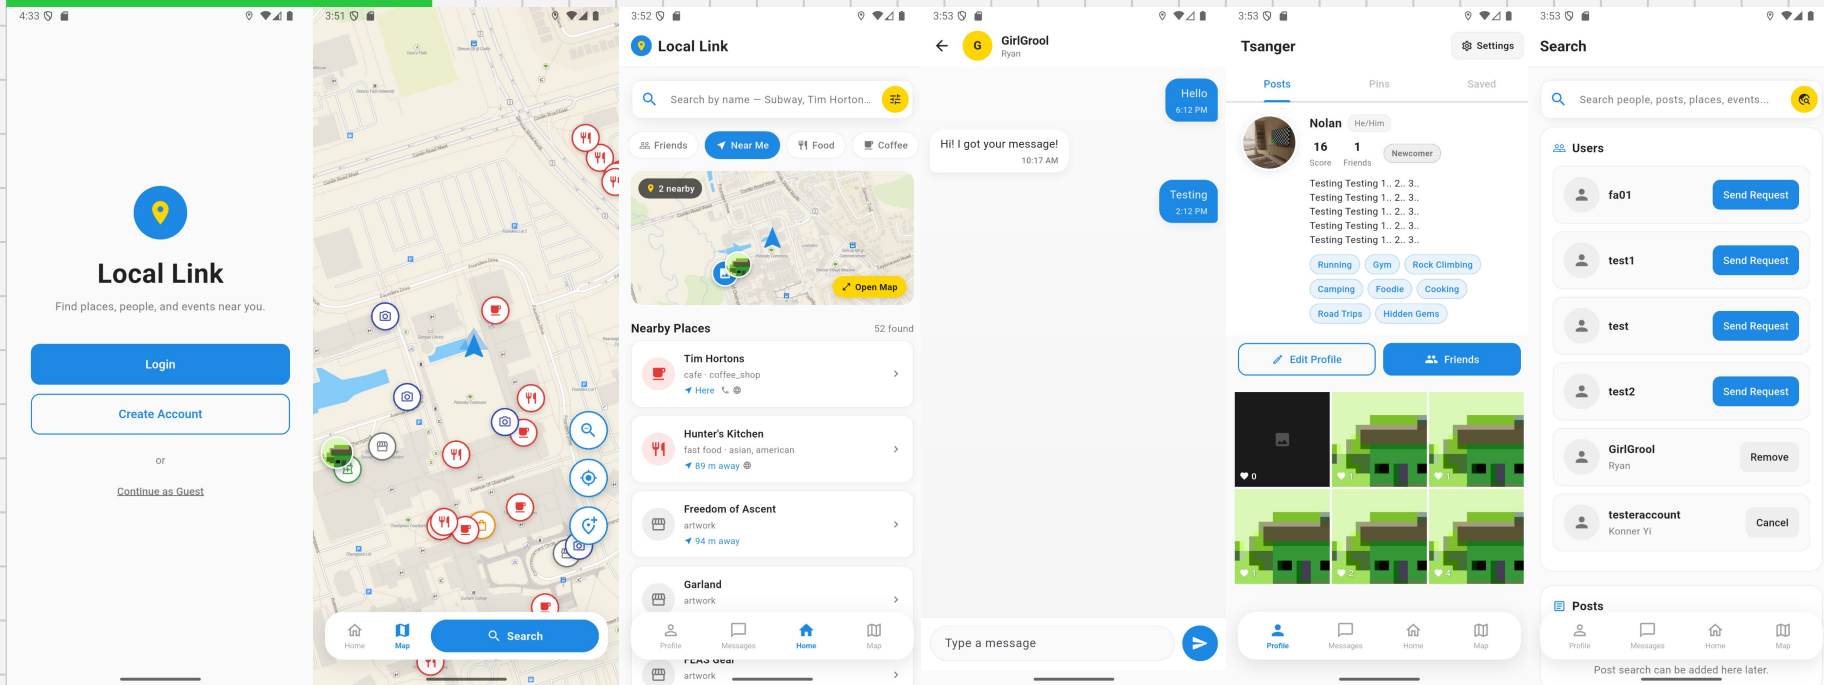

Recap
